

With the cabling infrastructure in place, hubs, switches and routers manage communications of the network. Selecting the right equipment, product features and taking advantage of the latest technologies will allow for optimum network performance. Protocol Network Integration provides a consultative and independent approach to review the business requirements of your network, in order to propose a solution

## Network Design

---

When reviewing strategy or designing new networks, there is considerable array of technical issues and product offering to be considered. Network communications are critical to most businesses and represent a considerable financial investment.

Protocol Network integration will present a network design that takes account of all strategic, operational and budgetary requirements.

## Key Products

---

Protocol Network integration provides independent solutions to networking requirements, using products from market-leading manufacturers. The network consultancy team continually update their expertise with the latest products and technologies available.

In order to provide the highest level of support to demanding projects, Protocol Network integration has invested in a strategic relationship with 3Com. The worlds largest hardware manufacturer. With the highest level of accreditation as an ASP Partner, Protocol Network Integration can offer powerful solutions to meet demanding requirements.

## Installation and Project management

---

From initial survey to project managed installation, Protocol Network Integration maintains a close relationship with clients in order to maintain a managed and flexible approach.

Experienced Project Managers are assigned to manage the complete network implementation program. This includes communications with the client and suppliers, setting delivery dates, responsibilities of engineers and scheduling the installation and configuration program.

## Training and Maintenance

---

After installation, Protocol Network Integration can provide a comprehensive range of training and maintenance services to support your ongoing business requirements.

## **Network Health Checks**

---

Prior to proposing new network designs, Protocol Network Integration network consultants can undertake a comprehensive audit and health-check of existing network resources. Comprehensive tests and surveys are undertaken using sophisticated equipment. In this way, problem areas such as overloaded or bottlenecked traffic and cable faults can be identified.

## **Total Capability**

---

Protocol Network Integration provides the expertise and experience to build complete networks, whether small workgroups or connecting sites worldwide.
